

‘First Comes Strength, Then Comes Peace’: How Israel Gave the US the Perfect Beta for Testing Bunker-Buster Bombs and Testing the New World Order

Amy Neustein, Ph.D.

As a researcher, I am all too familiar with the difficulties and challenges of selecting the right real-world environment

for testing a prototype. Whereas new technology can readily pass its alpha phase, defined as a controlled laboratory setting where parameters are carefully determined ahead of time, the beta phase is much more grueling, and certainly much less predictable.

So, what we recently saw with the successful beta testing of a set of 14 30,000-pound bunker-buster bombs on Iran’s formidable nuclear facilities was an affirmation of U.S. defense prowess paired with the most propitious environment for resoundingly successful beta results.

That propitious environment, where the American-made bunker-buster bombs proved their efficacy and strength in decimating Iran’s fortress-like nuclear plant, is Israel’s superior military and defense systems. By strategically degrading and weakening Iran defenses — destroying missile launchers, eliminating nuclear scientists and military commandos, and taking control of their skies — Israel prepared the most favorable setting for the U.S. to put on display before the world its mega bomb that can penetrate the thickest geological structure housing the IR-6 models, which are the most advanced centrifuges used to enrich uranium to weapons-grade levels.

Prime Minister Benjamin Netanyahu understood the seismic shift in world order achieved by this masterful joint effort with the United States. In giving his congratulatory speech to Trump after the completion of the successful operation, Netanyahu effused his joy, exhilaration and relief that Iran’s nuclear facilities were finally destroyed, thereby averting a daunting arms race in the Middle East.

Even more compelling was Netanyahu’s expression of gratitude to God at the Kotel (Western Wall) the day after this extraordinary defeat of Iran’s nuclear capabilities. Netanyahu understood the historical importance of this joint effort and its religious significance. Infiltrating the redoubtable Fordow nuclear plant buried underground in impenetrable rock is a modern-day “Battle of Jericho” where the thick walls of Jericho had miraculously collapsed after six days of Israelites marching around the city and blowing horns.

The beta testing of this New World Order has now begun. What better testing environment than one where the intensity of uncivilized, barbaric behavior has given rise to terrorist proxies and sleeper cells that have caused irreparable harm to unsuspecting victims? In Netanyahu’s words, “First comes strength, then comes peace.”

Many of us who are old enough to remember can harken back to 1979 when Iran took 66 American Embassy workers hostage, holding them in captivity for 444 days until Ronald Reagan’s inauguration as the new U.S. president.

Iran’s bloodstained hands are perhaps best remembered when they killed 20-year-old Alisa Flatow in 1995 while she was a student at Nishmat in Jerusalem. Countless times Iranian students have participated in demonstrations chanting vociferously “Death to Israel” and “Death to America.”

Netanyahu, in making a public statement following the U.S.-led “Operation Midnight Hammer,” aptly stated “Mr. Trump ... the forces of civilization thank you.”

Yes, a civilized, law-abiding regime is one where its denizens do not fear reprisals for speaking up. Nor do its neighbors fear annihilation from the people next door. We are at the dawn of a New World Order. Netanyahu has beseeched the Iranian population to jettison its despotic, maniacal and dangerous leadership — that is, to have a regime change so that neighbors can live peacefully side-by-side.

The beta testing of this New World Order has now begun. What better testing environment than one where the intensity of uncivilized, barbaric behavior has given rise to terrorist proxies and sleeper cells that have caused irreparable harm to unsuspecting victims? In Netanyahu’s words, “First comes strength, then comes peace.” These words resonate with me, because their conceptual archetypes are written in the Ten Commandments.

Why did God command the Israelites to “Honor thy father and thy mother”? Because love does not exist unless there is strength. Parents must show their children fortitude, courage and resolve. In exchange, the child will respect, honor and revere the parent. Love for one’s parent will then flow from the respect that one has for that parent. Similarly, peace in the Middle East, and peace in the world, is the natural, inevitable consequence of showing strength.

By taking the preemptive step to decimate the nuclear facilities that potentiate an apocalyptic end to civilization, Trump and Netanyahu have brought respect back to the Jewish state and to the Western world. We must continue to ride the crest of strength so that everlasting peace will soon be at our doorstep. I question why anyone might think otherwise. ■
